## Product Overview

Poynting's new PUCK range offers a small profile antenna for use in the IoT/M2M, Smart Meter, Smart Utilities, Transportation, Marine and the Agricultural/Farming markets. The PUCK-2 consists of a 2-in-1 antenna system within a single housing, featuring 2x2 MIMO LTE antennas (for 2G/3G/4G) that cover the 617 to 4200 MHz band which includes the most popular international LTE bands. The PUCK exceeds the performance of many competitors due to the attention to design of this high-performance antenna. The radiation patterns of all radiating elements provide an excellent balance between omnidirectionality, pattern diversity and good radiation abilities at the desired elevation which is often overlooked in such a small size antenna. Despite its small size, this antenna provides excellent performance especially at the higher frequency bands where performance is critical for LTE throughput and connection stability. This antenna is designed so that both the LTE ports are connected to the router/device to ensure the best performance. Please see other derivatives of the PUCK range that are more suitable for a SISO application.

**Antenna Performance Plots**

**VSWR**

**GAIN (EXCLUDING CABLE LOSS)**

**Voltage Standing Wave Ratio (VSWR)\***

VSWR is a measure of how efficiently radio-frequency power is transmitted from a power source, through a transmission line, into a load. In an ideal system, 100% of the energy is transmitted which corresponds to a VSWR of 1:1.

The PUCK-2 delivers superior performance across all bands with a VSWR of  $\leq 2.5:1$  across 90% of the bands.

*\*Measured with 2m low loss cable, 650 x 650 mm ground plane, and unused ports terminated with 50Ω load.*

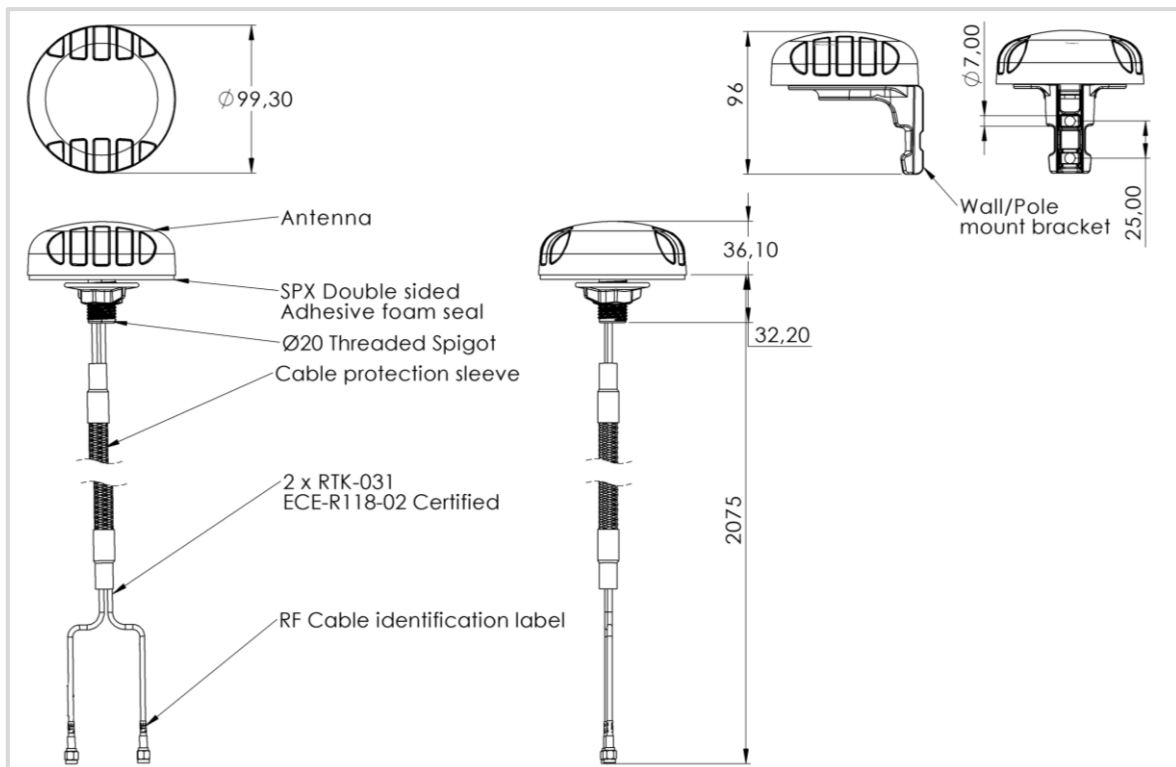

**Gain\* in dBi**

6 dBi is the peak gain across all bands from 617 – 4200 MHz

Gain @ 617 – 960 MHz:	0 dBi
Gain @ 1427 – 1517 MHz:	1 dBi
Gain @ 1710 – 2700 MHz:	5 dBi
Gain @ 3400 – 4200 MHz:	6 dBi

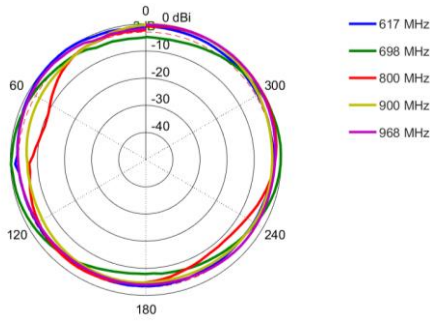

*\*Antenna gain measured with polarisation aligned standard antenna*
